

## Activity 1: For Clicks

For this activity, your task is to create a react application that counts the total clicks of the user on a button.

You may refer to the sample output below:

**Total no of clicks: 12**

## Activity 2: Phonebook

Your task is to create a Contact list application, which stores the current contact list as a state and passes an onAddContact handler to the ContactForm component to handle new contacts. You may refer to the sample output below:

React App
